Introducing Easy Typography

The `easy-typography` package transforms complex typographic decisions into simple choices, letting you focus on your content while ensuring professional results. By adjusting the settings to match your specific needs, you can refine the aesthetic or adapt your layout for everything from casual reading to formal publication.

1. Core Typography Features

The package manages:

- Precise heading scale with a clear hierarchy
- Optimal line height and paragraph spacing
- Professional text justification and hyphenation
- Balanced vertical rhythm throughout

These features ensure that your document is both visually appealing and easy to read.

1.1. Type Formatting

This package automatically adjusts line spacing, paragraph spacing, and justification to maintain a clean layout. Headings are also carefully weighted to balance them against the body text, so you can focus on content rather than tweaking spacing and sizing. Standard formatting like **bold** and *italic* integrates seamlessly with `easy-typography`'s approach.

1.2. Heading Levels

The heading scale gracefully steps down, ensuring that each level remains distinct yet consistent. Behind the scenes, `easy-typography` calculates the ideal size for each heading, preserving a cohesive visual hierarchy as your document gets deeper. This approach supports manuals, academic papers, and any long-form text where structure matters. It also helps in shorter documents, guaranteeing a crisp layout with minimal effort.

2. Why Typography Matters

Good typography isn't just about aesthetics. It's about effective communication. Well-designed text:

- Improves reading comprehension
- Reduces eye strain
- Maintains reader engagement
- Establishes visual hierarchy
- Conveys professionalism

Notice how this document's typography enhances readability. The justified text, proper hyphenation, and optimized line breaks create a clean, professional appearance. With each heading level, the user can quickly scan and digest important information.

3. Example Usage and Output

```
1   #import "@preview/easy-typography:0.1.0": *          t Typst
2   #show: easy-typography.with(
3     fonts: (
4       heading: "Source Sans Pro",
5       body: "Source Serif Pro"
6     ),
7   )
8
9   #lorem(6)
10  = Level One
11  #lorem(6)
12  == Level Two
13  #lorem(6)
14  === Level Three
15  #lorem(6)
16  ==== Level Four
17  #lorem(6)
18  ===== Level Five
19  #lorem(6)
```
